- Media Content
- Sketch
- Illustrator – BI
- Unity – BI
- Media M.

TESTIMONIES

- **QA & Testing:**
  - As a junior QA, tester, and user, I understand the importance of analysis and effective methods on a project, taking care of all aspects that can reduce or eliminate unexpected results in a product or team before its launch.
- **I.T:**
  - As an I.T I was able to develop networking skills and people skills, along with my manager I developed project implementations for 5 clients, 2 production floors, planned and lived a disaster recovery, equipment logistic, equipment wipe to protect the data, midnight testing to avoid negative impacts and security policies.

- **Front End Development – Ui / Ux**
  - As a developer I can create interfaces that the user understands and love, taking care of the visual aspect but also the efficiency of it. I can learn any kind of language or tool that the company needs to enhance the functionality of the product.
